Art Unit: 2712

DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

2. The drawings are objected to because of informalities addressed in form PTO 948.

In addition, in Fig. 4, Fig. 18 and Fig. 19, "A/C 32" should be changed to --A/D 32--;
and "comp dcomp MC 38" should be changed to --CEMC 38--, in order to be consistent with the

Correction is required.

disclosure of the specification, page 8.

Claim Objections

3. Claims 8-9 are objected to because of the following informalities:

In claim 8, line 4, "the sound" should be changed to -- the sound--.

Claim 9 is objected as being dependent on claim 8.

Appropriate correction is required.

Claim Rejections - 35 USC § 103

Application/Control Number: 08/859,276 Page 3

Art Unit: 2712

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 1-4, 10-17, 20-25, 28-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hashimoto et al. (US 5,815,201) in view of Kawakami et al. (US 4,660,102).

Regarding claim 1, Hashimoto et al. disclose an electronic camera which captures both images and audio which are associated with the images, comprising an image device disclosed as CCD 9 (fig. 8, col. 6, lines 43-50); a sound recording device, disclosed as microphone 1 (fig. 8, col., lines 20-23); a storage medium, disclosed as memory card 16 (fig. 8, col. 7, lines 35-53); a release switch, disclosed as shutter release button 124 (fig. 1A, col. 4, line 12); a control device, disclosed as CPU 23 (fig. 8, col. 7, lines 17-65). Hashimoto et al. fail to specifically disclose a sound effect output device that outputs a preset sound effect when the release switch is operated. However, Kawakami et al. teach that when the shutter release button 142 of the camera is activated, in order to clearly notify the recording operation to the operator, a tone generating device (sound effect output device) may be arranged so that a pseudo-shutter sound (sound effect) is produced when the recording operation on the magnetic disk 124 is initiated (col. 4, lines 29-49). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the camera in Hashimoto et al. by the teaching of Kawakami et al. in order to clearly notify the recording operation to the operator (col. 4, lines 44-49).

Application/Control Number: 08/859,276

Art Unit: 2712

Regarding claim 2, Hashimoto et al. disclose a view finder as view finder 134 (fig. 1B, col.

Page 4

4, line 17); an information output device, disclosed as red LED 112 (fig. 1A, col. 4, lines 1-3).

Regarding claim 3, Kawakami et al. disclose the preset sound effect is a shutter sound effect (pseudo-shutter sound, col. 4, lines 44-49).

Regarding claim 4, Hashimoto et al. disclose the storage medium stores the images and the sounds together (see abstract).

Regarding claims 10-13, Hashimoto et al. disclose the image can be played or presented at the same time as the audio are presented to a user (a sound playback device, see abstract).

Hashimoto et al. do not disclose a sound removing device. However, this is not a patentable distinction. The use of a sound removing device is so notoriously well-known as a way to removing sound effect in the sound recorded in order to get the desired sound recorded together with the images.

Regarding claim 14, Hashimoto et al. disclose a display as a color LCD panel (col. 6, lines 61-64).

Regarding claim 15, Hashimoto et al. disclose an illumination device as flash 20 (fig. 1A, col. 3, line 56).

Regarding claim 16, all the limitations are contained in claim 1. Therefore, see Examiner's comments regarding claim 1, except the limitation indicating means, which is disclosed by Hashimoto et al. as shutter release button 124 (fig. 1A, col. 4, line 12).

Application/Control Number: 08/859,276 Page 5

Art Unit: 2712

Regarding claim 17, it is considered analogous to claim 2. Therefore, see Examiner's comments regarding claim 2.

Regarding claim 20-23, they are considered analogous to claims 10-13. Therefore, see Examiner's comments regarding claim 10-13.

Regarding claims 24-25 and 28-30, these claims are method claims of apparatus claims 16-17 and 20, 22-23, respectively. Therefore, claims 24-25 and 28-30 are rejected for the same reasons given respect to claims 16-17 and 20, 22-23.

6. Claims 5-9, 18-19, and 26-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hashimoto et al. (US 5,815,201) in view of Kawakami et al. (US 4,660,102) in view of Arai et al. (US 5,576,758).

Regarding claims 5-6, Hashimoto et al. and Kawakami et al. do not explicitly disclose a setting device that sets a photographic environment and the setting device is a compression device. However, Arai et al. teach a digital electric still camera in which the image data is compressed before being recorded and data compression rate is selectable by operating a picture mode button (see abstract). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the camera in Hashimoto et al. and Kawakami et al. by the teaching of Arai et al. in order to let the photographer can learn from the reproduced photographic scenes the optimum data compression rate for various scenes, and can select a suitable data compression rate during photographing (col. 2, lines 5-10).

Application/Control Number: 08/859,276 Page 6

Art Unit: 2712

Regarding claims 7 and 9, Kawakami et al. disclose sound effects as pseudo-shutter sound (col. 4, lines 44-49). Arai et al. disclose the compression rate (col. 3, lines 20-30). It is obvious that the frequency of the sound effect is changed based on the selected compression rate in order to be recorded sound associated with image data at different compression rate.

Regarding claim 8, Arai et al. disclose the setting device further sets an information input apparatus operating mode (col. 3, lines 10-47).

Regarding claims 18 and 26, each of these claims is considered analogous to claims 6 and 7. Therefore, see Examiner's comments regarding claim 6 and 7.

Regarding claims 19 and 27, each of these claims is considered analogous to claim 8.

Therefore, see Examiner's comments regarding claim 8.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kinoshita (US 4,983,996) discloses data recording apparatus for still camera.

Tanaka et al. (US 5,099,262) disclose camera having sound recording function.

Bell (US 5,784,525) disclose image capture apparatus with sound recording capability.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to **Luong Nguyen** whose telephone number is (703) 308-9297. If attempts to

Art Unit: 2712

reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wendy Garber, can be reach on (703) 305-4929.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

Washington, D.C. 20231

or faxed to:

(703) 308-6306

or:

(703) 308-6296

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal drive, Arlington, VA., Sixth Floor (Receptionist).
